

## Product Improvement RMC-type Cables

In its continuing quest to provide the highest quality Products that combine world leading technology and innovative features, Eupen Cable is pleased to inform you of an improvement to our Range of RMC-type Radiating Cables.

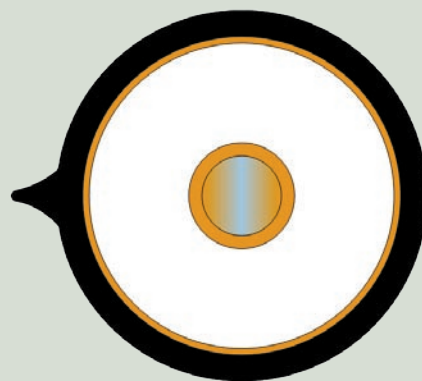

With immediate effect will all RMC-type Radiating Cables carry a longitudinal embossed line which is positioned 180° opposite to the Slots on the Outer Jacket.

This product improvement has been implemented to aide the correct positioning of the RMC-type cables even under restricted light conditions.

To ensure continued ease of Connector Installations, this longitudinal embossed line should be removed as part of the Cable preparation procedure.
